MATERIALS
Composite materials

Fibres have different mechanical characteristics: High modulus, High elongation, High strength ...

Main feature to describe the fibre:

**TENSILE STRENGTH**: the tensile strength of a material is the maximum amount of load stress that it can be subjected to before failure;

**TENSILE MODULUS**: Is the description of the material’s tendency to be deformed elastically (non-permanently) when a force is applied to it; It is a measure of stiffness;

**DENSITY $g/cm^3$**: ratio between weight and volume.
The fabrics are obtained from the fibres with which the frame is made.

- Combination of fabrics (layers) with different characteristics
- Different positioning of the fabric (orientation 0°/+45°/-45°)
- Number of layers in the different critical points of the frame
- Production process (technology of molding and construction)

Bianchi | Road Technology
ROAD TECHNOLOGY - CARBON

X-TEX - CROSS WEAVE

WHAT
- A cross weave layer inside the critical areas of the frame (head tube and BB area).
- Carbon strips are molded into the carbon structure

REASON WHY
• torsional rigidity

STRUCTURAL STIFFNESS
ROAD TECHNOLOGY - CARBON

WHAT
- accurate control of the laminate of each frame by **pre-tuning process** → avoiding the wrinkles in the material which affect the property of the whole frame.

REASON WHY
- frame efficiency
- process efficiency
- thickness
- weight

PRE-TUNING PROCESS
THT - TRIPLE HYDROFORMED TECHNOLOGY

WHAT
- Hydroforming process of the top and head tubes
- Top and head tubes are welded and then fused together into a monocoque structure
- Final hydroforming process

REASON WHY
- rigidity
- design
- fatigue

HYDROFORMING PROCESS
1 - Tube positioning
2 - Mold closing
3 - Fluid immission
4 - End section
5 - High pressure forming
6 - Part is ready

BIANCHI EXCLUSIVE TECHNOLOGY

ROAD TECHNOLOGY - ALUMINIUM
WHAT

BIANCHI’S INNOVATIVE SOLUTION TO CANCEL VIBRATION

Bianchi collaborated with Materials Sciences Corp. to develop our innovative and exclusive application of the patented Countervail® integrated vibration canceling system for cycling. The result is the new Bianchi Infinito CV.

* Scientific studies prove that long term exposure to vibration, typically absorbed by the rider, causes muscle fatigue and discomfort, resulting in reduced performance.

INTEGRATED SYSTEM PROVEN IN NASA AEROSPACE OPERATIONS

Traditional passive damping of the frame using superficial rubber inserts and isolators are only marginally effective compared to the integrated carbon Countervail® system developed by Bianchi and proven in the extreme conditions of NASA aerospace operations.

With its patented carbon fiber architecture and viscoelastic material, Countervail® carbon material is embedded within our unique Infinito CV carbon layup to cancel vibration while increasing the stiffness and strength of the entire frame.

REASON WHY

- Maximized handling and ride control under normal to extreme vibration loads
- Reduced muscle fatigue and increased energy savings during long rides
- Increased rigidity and peak power output over long distances

SINGLE IMPULSE FORCE REACTION

Traditional carbon frame continues to vibrate

Carbon frame with Countervail® immediately cancels vibration

75%
Increased vibration cancelling capacity
ROAD TECHNOLOGY - CARBON

**WHAT**
To obtain different stiffness behaviour under different directional forces, without wasting power transfer.
- Special lay-up and different material combination (CARBON - KEVLAR)
- Special design

**REASON WHY**
- shock absorption
- best adherence
- fatigue

**HIGH TORSIONAL RIGIDITY**

Damping effect of the Kevlar
Standard effect fiber carbon anti-vibration
Effect KEVLAR anti-vibration

VERTICAL VIBRATIONS ABSORPTIONS WITHOUT WASTING POWER TRANSFER
ROAD TECHNOLOGY - CARBON

**UTSS - ULTRA THIN SEAT STAYS**

**WHAT**
- Improved shock absorption and impact resistance
- Reduced frame weight
- Power transmission is now focused through the chain stays, leaving the seat stays as a compliant support structure

**REASON WHY**
- shock absorption
- impact resistance
- power transmission
- weight

Ride beyond limits. The HoC category includes extreme racing performance carbon frames, optimized to achieve the most efficient power transmission with the best rigidity to weight ratio. The ideal bikes for the most expert riders.

**PROJECT PHILOSOPHY**

- Reactive geometry
- Xtreme racing performance bike
- Maximum torsional rigidity
- Light weight
- Extreme rigidity-to-weight ratio

**MODELS IN THIS CATEGORY**

- OLTRE XR2
- OLTRE XR1 **NEW**
PROJECT PHILOSOPHY

- Dedicated to extreme racing performance thanks to the super rigid frame and to Bianchi’s unique geometry, the Oltre XR2 assures fast acceleration, perfect power transmission and the best handling in the market.
- Design and performance meet thanks to the Technical Design oriented approach: super light frame for optimal performances in the climbs and aero shape to make the bike faster on the flat and downhill segments.

**The best performance Bianchi road frame ever!**

PRODUCT FEATURES

- Tapered headtube 1 1/8” to 1.5” to improve rigidity of the front end, which improves the handling and power transmission.
- BB386 improves stiffness.
- Double compatibility mechanical and electronic groupset.
- Aero shape and design.
- Dedicated seatpost system with integrated look.
- Internal cable routing.
- UTSS Ultra Thin Seat Stay.
- 7 sizes: 47, 50, 53, 55, 57, 59 and 61cm.
- Weight in 55 size: 895g (target, +/- 5%).

TECHNOLOGIES

AVAILABLE AS A FRAMESET
BB386 EVO:

- The latest bottom bracket standard by FSA
- BB shell dimension: 86.5 mm (width) x 46mm (diameter)
- 30mm PF30 spindle diameter

BB Area stiffer and lighter then a BB30 standard
**FORK**

- Down tube integrated design for improved aerodynamics
- Reactive geometry
- Super rigid
- Light weight
- Weight: 355g (target)

**SEATPOST**

- Full carbon aero seatpost with integrated look
- Unidirectional carbon fiber finish
- 4 different lengths: 250mm (47), 300mm (50 to 53), 350mm (55 to 59) and 380mm (61)
- New 30mm offset for 250/300mm
- 25mm offset for 350/380mm
- Weight: 195g
PRODUCT FEATURES

- Aero shape and design
- Tapered headtube 1.1/8” to 1.5” to improve rigidity of the front part, which improves the handling and power transmission
- BBset 86.5 x 41 - Internal cable routing
- Double compatibility mechanic and electronic groupset
- New carbon dropout with metal insert
- Full carbon aero seatpost easy adjustable with integrated look
- UTSS Ultra Thin Seat Stay
- 7 sizes: 47, 50, 53, 55, 57, 59 and 61cm
- Weight in 55 size: 1000g (target, +/- 5%)

**UNIQUE SELLING POINTS**

- Experience the ultimate in Bianchi design which can be found in our uncompromising racing geometry ensuring maximum power transmission.
- Representing the latest in composite technologies used in the cycle industry.
- A winning combination of lightness, rigidity and aerodynamics: precise and responsive for when accelerating hard.
- An ultra-high performance bike as used in the UCI World Tour, for those looking for the best.

PROJECT PHILOSOPHY

The bike for all kinds of riders.
New big sections in important areas such as down tube/head tube 1.5” and BB for better rigidity and handling.
Over sized chain stays for direct power transmission.
Bianchi Racing geometry.
Optimal rigidity.

PRODUCT FEATURES

- Carbon Monocoque frame with new PF30 and tapered head tube 1 1/8” to 1.5”
- UTSS Ultra Thin Seat Stay to save weight combined with over sized chain stays for direct power transmission
- Full Carbon fork 1 1/8”-1.5”, “straight/bent” blades (for all models)
- Double compatibility mechanical and electronic
- Internal cable routing
- Weight for 55 size: 990 gr +/- 5%
SEMPRE PRO - ULTEGRA 11SP COMPACT
**UNIQUE SELLING POINTS**

- Born for competition at all levels, suitable for both the racer and the sportive rider.
- Constructed from high modulus carbon fibre ensuring a high performance bike that is both light and responsive.
- A top quality racing machine with the best quality/price ratio.
- Used by the professional cycling team Team Androni - Venezuela

ADVANTAGES:
- INCREASED BIKE CONTROL
- REDUCED MUSCLE FATIGUE
- ENERGY SAVING
- INCREASED RIGIDITY
- PEAK POWER OUTPUT
**UNIQUE SELLING POINTS**

- Constructed using Countervail: a cutting edge composite material used in the aerospace industry. Used exclusively in the world of cycling by Bianchi.
- Designed to ensure high rigidity with a great fluency whilst reducing physical fatigue and stress to the rider.
- Downtube dimensions are optimized for every size, ensuring a balanced geometry with maximum stability and control.
- Suitable for those demanding a high performance bike over all types of road under all conditions.
- Tested under racing conditions in a UCL World Tour Classic.

D2 - SPECIAL

The best on all roads, whether tarmac or dirt. D2 bikes feature special frames to fight against the clock in professional time-trial races or to face muddy courses in cyclo-cross events.

TIME TRIAL / TRIATHLON

- Frames developed to obtain the best performances against the clock in time trial competitions
- Super rigid, lightweight and aerodynamic models fine-tuned for maximum performance

MODELS IN THIS CATEGORY

- Aquila CV
- Pico Alu (TT & Triathlon)

CYCLO CROSS

- Frames developed to obtain the best performances in particular cyclocross condition matching lightness and resistance

MODELS IN THIS CATEGORY

- Zolder
- Zurigo

## PROJECT PHILOSOPHY

The completely new **Aquila CV** carbon frame with patented Countervail® material is engineered by Bianchi for superior aerodynamic advantage and ride control while reducing muscle fatigue. The frame is designed using the most advanced **CFD** (Computational Fluid Dynamics) simulation software and it is tested in the wind tunnel with our WorldTour athletes from the Belkin Pro Cycling team. The concept behind the creation of new bike is to minimize the aerodynamic drag through special design and seamless integration components. Frame has entirely smooth surfaces and no exposed fasteners.

## PRODUCT FEATURES

- **NACA (National Advisory Committee for Aeronautics)** aerodynamic profiles
- Monocoque carbon frame
- High-modulus carbon frame with innovative **Countervail®** carbon material to cancel vibrations
- Full carbon fork
- Dedicated geometry with 76.5° seat tube angle and 72° head tube angle
- Adjustable rear dropouts to reduce the turbulences minimizing the distance between the rear wheel and the seat tube
- Compatible for mechanic and electronic groupsets
- Internal cable routing
- Absence of truncations
- Integrated aerodynamic bars and stem
- Concealed front brake
- Minimized rear brake set-up located at the bottom-bracket area
- Weight: 1,30 Kg
- Sizes: XS — S — M - L

## TECHNOLOGIES

![Countervail®](image_url)
CONCEALED BRAKES

Bianchi’s experience in the wind tunnel combined with CFD simulations confirms that the front area of the bicycle is the most important when considering aerodynamic drag. With this in mind, Bianchi engineered a customized front tube cover, made in carbon, to smoothly hide the V-brake system. The rear V-brake is positioned in the bottom-bracket area to minimize the aerodynamic drag.

SUPER AERO HANDLEBAR

Aquila CV features full NACA airfoil shape of the handlebar (designed by Bianchi), smoothly integrated into the form of the frontal area of the frame. All cabling and wires are run internal to the bar to exclude them from wind drag.

Three different stem lengths:
1. 90mm
2. 110mm
3. 130mm

DOUBLE POSITIONING SEATPOST

The aluminum seatpost clamp of the Aquila CV features 2 different positions to allow road TT and triathlon configuration with +/- 18mm setback.

TECHNICAL SPECS NOT AVAILABLE AT TIME OF PUBLICATION (JULY 2014)
Bianchi was first to move fixed gear bikes from track to city roads. With pure speed, glamour and simplicity, Bianchi Pista bikes make cities their second homes.

PROJECT PHILOSOPHY

- In the US the messengers bikes started being a “cool” factor to kids who were growing out of skateboarding.
- The popularity of fixed gear bikes is also growing in Europe as a fashion and lifestyle cycling movement.
- Track bikes for track use that are offered for urban use.

**Bianchi Frame Optimization Process**
WHAT
The top tube and down tube feature a further inner carbon blade that makes up two separate bondless chambers.

REASON WHY
- rigidity
- strength
MTB TECHNOLOGY - CARBON

WHAT
Reinforcement carbon ribs embedded into the main tube profiles torsional stiffness of the head tube and the Bottom Bracket area.

The crank-frame interface becomes stronger.

REASON WHY
• torsional rigidity
**MTB TECHNOLOGY - TITANIUM**

**WHAT**
A titanium net is molded together with the carbon fiber on the down tube to protect the frame from possible impacts with stones/material thrown by the front wheel.

**REASON WHY**
- Impact resistance
- Frame life

**BARRIER**
MTB TECHNOLOGY - CARBON

WHAT
Special designed stays with “S” shape and laminated with carbon/glass fibers enhance absorption of vertical shocks on the rear stays without weakening torsional stiffness.

REASON WHY
• shock absorption
• power transmission
WHAT
Possibility to cut the seat tube and insert a traditional seat post, thanks to precise thickness calibration along the whole integrated seat post.
ASMMETRICAL REAR STAY

WHAT
Optimized rear stays design to obtain a very compact and reactive rear triangle without sacrificing on chainline clearance. It fits different chainrings combinations and it is optimized to improve power transmission on the driveside.

REASON WHY
• power reactivity
• pedalling performance

RACING

PROJECT PHILOSOPHY:
- Extreme rigidity for maximum pedalling power transmission
- Super reactive geometry for better handling and responsiveness
- Super light weight

TARGET CONSUMER:
- Those who want a very versatile bike which can still be raced on
- Any sporty people who want a premium quality bike for every kind of riding

MODELS OF THIS CATEGORY - METHANOL

PERFORMANCE

PROJECT PHILOSOPHY:
- Optimized ratio between vertical absorption and lateral stiffness
- XC geometry for race-ready handling
- Reliability at still a light weight

TARGET CONSUMER:
- Those who want a very versatile bike which can still be raced on
- Any sporty people who want a premium quality bike for every kind of riding

MODELS OF THIS CATEGORY - ETHANOL - JAB

OFF-ROAD

PROJECT PHILOSOPHY:
- Optimized geometry for easy handling on and off road
- User-friendly frame angles and cockpit for a relaxed position

TARGET CONSUMER:
- Those who look for a top quality bike for recreational use
- Those who want to showcase a Pure Italian Design machine

MODELS OF THIS CATEGORY - KUMA
Fast, light and aggressive. Our Cross Country bikes are designed to offer optimal performance for professional racers and anyone who wants to enjoy a thrilling ride in the woods. The XC Bianchi frames are built to offer maximum power transfer combined with precise handling.

Enduro bikes encapsulate the adrenaline rush of racing and the adventurous spirit first discovered when mountain biking was created. Enduro bikes are designed for long rides climbing in the mountains and the some racing fun on the descents home. This spirit is encompassed in the Enduro Racing category and the Enduro World Series (EWS). These bike excel on the descents. The suspension and steering are placed at the heart of the design process, so that every climb can be conquered with ease before enjoying the fun of the descent.
